Concepts:

- Borrowed chord: chord that is not built from the scale of the tonic. Examples:
 - “Picardy third”: a progression with an ending major triad instead of an expected minor triad to create an impression of resolution.
 - Use the bVII
- Transistion Chords:
 - Secondary dominant chord (tonicization) (V/x): using the fifth of a chord (even if it’s not a diatonic chord) in order to feel a “resolution” on this chord.
 - Tritone substitution (V_{sub}/x or $bV7/V$): Approach any target chord with a diminished 7 chord a semitone above.
 - Backdoor [ii V]. Approach the tonic with $iv7 - bVII7 - I$.

– Modulation (Rick Beato):

- * Diatonic common chord (“close” keys have many chords in common that can be used to modulate from a key to another. Common chords are called pivot chords)
- * Chromatic pivot chord
- * Enharmonic dominant
- * Deceptive
- * Enharmonic Dim7
- * Dim7 to Dom7 (lower the root of the dim7 chord to create a dominant chord that leads to a new tonic)
- * Chromatic Mediant
- * Common tone (Pivot note)
- * Direct or Linear (Abrupt change of key without preparation to “lift” the song)
- * Chain Modulation ()
- * Parallel modulation (Modulation of the mode but keep the same root ex: C to Cm)
