#### 3.4 Chord inversions

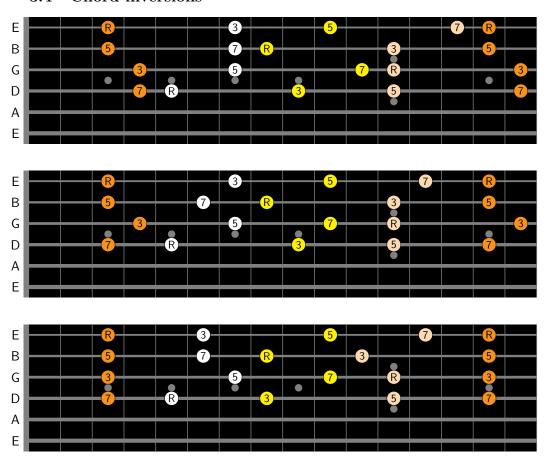

Figure 7

#### Concepts:

- Borrowed chord: chord that is not built from the scale of the tonic. Examples:
  - "Picardy third": a progression with an ending major triad instead of an expected minor triad to create an impression of resolution.
  - Use the bVII
- Transistion Chords:
  - Secondary dominant chord (tonicization) (V/x): using the fifth of a chord (even if it's not a diatonic chord) in order to feel a "resolution" on this chord.

- Tritone substitution (Vsub/x or bV7/V): Approach any target chord with a diminished 7 chord a semitone above.
- Backdoor [ii V]. Approach the tonic with iv7 bVII7 I.
- Modulation (Rick Beato):
  - \* Diatonic common chord ("close" keys have many chords in common that can be used to modulate from a key to another. Common chords are called pivot chords)
  - \* Chromatic pivot chord
  - \* Enharmonic dominant
  - \* Deceptive
  - \* Enharmonic Dim7
  - \* Dim7 to Dom7 (lower the root of the dim7 chord to create a dominant chord that leads to a new tonic)
  - \* Chromatic Mediant
  - \* Common tone (Pivot note)
  - \* Direct or Linear (Abrupt change of key without preparation to "lift" the song)
  - \* Chain Modulation ()
  - \* Parallel modulation (Modulation of the mode but keep the same root ex: C to Cm)
- Substitution tritonique
- Substitution diatonique

### 4 Modes

- Ionian (Joy), dorian(Jazz), phrygian(flamenco,doom), lydian (floaty,mystery) (ex: E.T., Jurassic Park, Back to the Future), mixo(blues)(ex: AC/DC), aeolian(sad)(ex: Losing my Religion), locrian(tension)(ex:Bjork Army of Me)
